Finite Features in Holography

Dionysios Anninos

(King's College, London)

Date: December 5, 2022

Time: 3 PM IST

Zoom link shall be shared separately

We consider theories of gravity where a more "finite" holographic theory is relevant. From a Lorentzian perspective we comment on properties of gravity in the presence of finite timelike boundaries, and holographic realisations. Time permitting, we also discuss Euclidean gravity on manifolds with no boundary, like Euclidean de Sitter.
